Subject: APC Review of Axiom Impressions Performance Test Requirements

Hello David West,

Regarding performance testing of Axiom Impressions in Portland, APC has concluded that Axiom's previous testing at the 106 Western Drive location in Portland will waive the testing requirements in construction permit 970052 issued to Axiom at 104 Challenger Drive on 4.28.2014. If Axiom wants a hard copy response letter with this email results, they will have to provide a signed letter for APC to respond to. But APC has the previous test results and the APC approval letter dated June 10, 2014 in our data base. We will record this event in APC's data base, as well. This email can serve as Axiom's record of APC's waiving of the testing requirements in the current construction permit 970052. I have to issue the operating permit before April 1, 2016.

I am available for assistance, if needed.

Have a fine day...

Robert Benjamin
